Career Summary

Computer Science Engineering student graduating in 2027, seeking an entry-level Web Developer or Frontend Developer position. Skilled in HTML, CSS, and JavaScript for building interactive web interfaces, with project experience integrating web pages with Python-based applications. Familiar with DOM manipulation, responsive design fundamentals, Git, and GitHub. Eager to contribute to web development projects, write maintainable code, and continue learning industry-standard development practices.

Technical Skills

- **Frontend Development:** HTML5, CSS3, JavaScript (ES6+), DOM Manipulation, Event Handling, Responsive Web Design
- **JavaScript Concepts:** Variables, Functions, Arrays, Objects, Callbacks, Promises, Async/Await, Fetch API Fundamentals, JSON
- **UI Development:** Forms, Buttons, Interactive Components, CSS Flexbox, CSS Grid, Basic Accessibility
- **Backend Technologies:** Python, Flask, Django
- **Databases:** SQLite, Basic SQL
- **Developer Tools:** Git, GitHub, Visual Studio Code, Browser Developer Tools
- **Professional Skills:** Problem Solving, Teamwork, Adaptability, Quick Learning

Web Development Projects

AI-Recommended Diet Planner *GitHub Project*

- Developed a web application that presents personalized diet recommendations using user information such as age, height, weight, and gender.
- Built user-facing pages with HTML, CSS, and JavaScript to organize inputs, display information, and support interaction.
- Used Python and Flask to implement application logic and connect the web interface to backend functionality.
- Worked with SQLite for application data management and implemented BMI, BMR, and estimated daily calorie requirement calculations.
- Integrated an AI-assisted chat feature for diet-related questions within the application.

Technologies: HTML5, CSS3, JavaScript, Python, Flask, SQLite
GitHub: github.com/layakpatel7-lab/smart_diet_planner

Industrial vs Residential Air Quality Prediction *GitHub Project*

- Worked on a Django-based web application for classifying locations as industrial or residential using air quality data.
- Contributed to the web interface and application flow connecting user inputs with prediction functionality.
- Used Python and machine learning workflows to process environmental parameters and generate classification results.
- Explored Logistic Regression, Decision Tree, and Random Forest models for the classification task.
- Worked with pollutant measurements including PM2.5, PM10, and other air quality indicators.

Technologies: HTML, CSS, JavaScript, Python, Django, scikit-learn

Education

Bheemanna Khandre Institute of Technology, Bhalki Expected 2027
Bachelor of Engineering in Computer Science and Engineering CGPA: 7.6/10

Relevant Coursework

Web Development • Programming Fundamentals • Object-Oriented Programming
Database Management Systems • Data Structures and Algorithms • Machine Learning Fundamentals

Additional Information

- **Career Interests:** Frontend Developer, Web Developer, Junior JavaScript Developer.
- **Project Portfolio:** Source code and project implementations available through GitHub.
- **Learning Focus:** Improving JavaScript, responsive interface development, debugging, and practical web application development.
